

Prompt Documentation - Backup Verification Simulator

AI Tool Used: ChatGPT

Purpose: Used for project architecture design, code generation, debugging, API development, and documentation creation.

Prompts Used During Development

1. Create a backup verification simulator using Python and SQLite.
2. Generate FastAPI endpoints for backup, restore and validation.
3. Create validation logic to compare row counts between production and restored databases.
4. Generate a backup verification report for pass/fail scenarios.
5. Create a Streamlit dashboard for backup monitoring and validation.
6. Simulate backup corruption and detect failures automatically.
7. Integrate OpenAI API for AI-generated backup reports.
8. Create GitHub issues automatically when validation fails.
